

Summary:

Don did an excellent job of exploring software for editing, the ScreenPlay Video Editor is the easiest video editor I have ever seen. Beginning users will find this many times easier to use than the current AVID system.

When loading video from a DV Camera, the ScreenPlay will see every Pause on the DV Tape as a separate clip. These pauses generate separate clips. Users can then drag these clips into the timeline for editing.

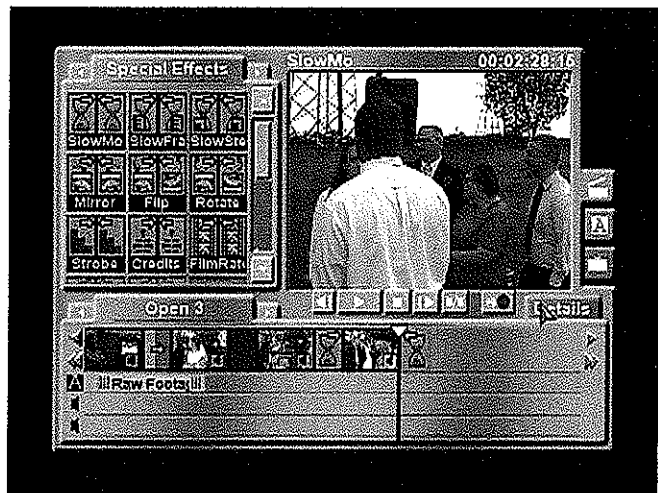

The ScreenPlay puts all the common functions a beginning editor will use right on the keys, making it easy to find.

The only thing the user needs to know is left click on an item on the screen to either drag and drop or select. The keys on the keyboard are marked in a way that's easy to understand what the function is.

Transitions are selected from a pictorial menu and dragged between each clip.

Both Special Effects and Color Effects are selected and dragged on top of the clip. If you don't like something, either use the UNDO Key or just click on the item in the timeline and drag it out of the timeline.

RE: INFORMATION ON STAFF FOR TCTV
PRODUCERS:

Question: What are the rules for the staff of TCTV Producers when assisting them at camera check out time?

FACT: Many TCTV Producers use friends and acquaintance's to help with their production for set up of sets etc. It is important to help TCTV Producers with their shows since no paid staff from the city are allowed in order for the show to be listed with Time Warner and the show to be considered for an award.

- 1. Can a staffer in the company of a TCTV Producer speak to any of the Torrance Employees?**
- 2. Can some simple questions be answered to the staffer that both the TCTV Producer and Staffer do not have the answer to if both come in to check out equipment?**
- 3. Are there some guidelines on these questions that could be given to the TCTV producers?**
